# A STUDY OF AWARENESS OF MUTUAL FUNDS INVESTMENT IN AHMEDABAD CITY

— *Dr. Hiral Parikh, Shrushti Shah & Nikunj Prajapati*

## Abstract :

In India mutual funds industry has grown drastically since last 20 years. The main reason behind this is that, that people with inefficient knowledge and limited funds prefer mutual funds schemes to get advantage of entire market. Mutual funds pool resources from thousands of investors and diversifies it's investment into many different holdings such as stocks, bonds or government securities in order to provide high returns and safety. The present study focuses on various types of mutual funds and investor towards them.

The study uses primary data of 121 respondents which is collected through the method of questionnaire. Respondents are widely spread in various income groups, age groups and occupation so that we get knowledge of entire market. The paper takes gender and income as independent variables and studies various parameters of investments like satisfaction level, period of investments, risk and return and percentage of savings to be invested in mutual funds.. It is found that the investors prefer doing SIP over lump sum investments in mutual funds. From the research point of view, the present study will helpful in the field of personal investment.

**Keywords :** Mutual funds (MFs), SIP, gender-wise, income-wise, risk and return

## I. Introduction :

Mutual funds are subject to market risks. India is heading towards Make-in-India project and encouraging small and medium scale industries. The risk free investments in India has taken a diversion towards risky investments at the same time a little safer than direct stock markets. The encouragement is given to mutual funds so that the economy grows and investors get higher returns.

There are various types of mutual funds and their benefits. Depending on the need of an investor he can invests. The paper focuses on the various types of mutual funds and investors perception towards them.

## II. A Review of Literature :

Sharma, (2020) observed that, equity share schemes have higher risk with higher return and mutual funds schemes have lower risk with lower return there are some companies

that can give positive returns to their investors, the annualized returns of bank ltd, Infosys ltd, Kotak Mahindra mf, SBI Mutual funds, Aditya Birla funds and Axis mutual funds are positive and the investor get the best return. It adds that, investment in both equity and mutual funds are subject to risk.

Maheshwari, (2020) studied the performance of mutual funds using performance evaluation technique like Ranking, Average Return, Standard Deviation Ratio and outcome from an evaluation will let the investor to contribute in categories of mutual fund.

Chakraborty, (2013) in his study examined that it is widely believed that a retail product designed to target individual investors, who are attracted to the stock market but, like to take advantage of stock market investing. Hence, it is a good idea to launch a mutual fund product and expecting a good response from the investors in the hour. A successful fund manager should study investor saving and investment based on the demographic profile and understand their needs and expectations. The performance to meet investor requirements.

Shiyang Huang, (2020) argued and empirically tested whether the liquidity practices can contribute to the increasing fragility in the Treasury market. The empirical findings to support our argument. First, the document that bond investors trade Treasuries to manage their liquidity needs, as the trading-to-flow ratio is higher on Treasuries than that on corporate bonds.

Panigrahi, (2020) observed that, the ELSS have offered attractive returns over the period of analysis making them an attractive investment option for investors. Investors have recognized this as it is evident from the current AUM of this category of funds at 1.2 lakh crore. Moreover, the tax benefit available by investing in ELSS, which reduces the income to the extent of mutual fund industry in our economy. The findings of the research could create business opportunities for many sub-functions involved in the functioning of ELSS mutual funds such as portfolio management service providers, stand-alone financial managers, professional training institutions and candidates willing to adopt this as a viable option.

Kishore Kumar Das, (2020) found that, with adaptation of digitalization in mutual funds, it has shown a very positive sign of increased participation by the investors. Demonetization may have initially hampered the financial markets, but soon it witnessed highest ever contributions towards asset base of mutual funds, in the year 2017 as compared to over a decade. Investors can now make direct investments, without involvement of any broker or distributor, soon ecommerce platform will make it even easier for the investors to invest in mutual funds.

### III. Research Methodology :

#### Objectives of the Study :

1. To study the awareness of mutual funds in the people of Ahmedabad city based on gender
2. To study the awareness of mutual funds in the people of Ahmedabad based on Income

#### Research Design :

The study uses descriptive

TABLE NO 1 : FREQUENCY TABLE

FREQUENCY TABLE	INVESTING FUNDS		TOTAL
	YES	NO	
<b>GENDER</b>			
MALE	64	32	96
FEMALE	18	7	25
TOTAL	82	39	121
<b>INDIVIDUAL INCOME PER ANNUM</b>			
BELOW RS 50000	20	17	37
RS 50000 - RS 1000000	42	3	45
RS 1000000 - RS 2500000	17	3	20
ABOVE RS 2500000	1	2	3
NOT MENTIONED	1	2	3
TOTAL	82	39	121

Out of 121 respondents, there are 82(68%) people investing in mutual funds and 39(32%) people are not interested in mutual funds investment. From 82 respondents, there are 64(78%) males and 18(22%) females investing in mutual funds. Mutual funds investment depends more on an individual income which can be a base to select that how much investment one is ready to do in mutual funds and whether they are interested to invest their spare income or do they find other investment options better. Table no. 1 shows that more than half 42(51%) out of 82 respondents earning an income between Rs. 500000 to Rs. 1000000 are investing in mutual funds. And 17 (21%) respondents with income between Rs. 10,00,001 to Rs.25,00,000 are investing in mutual funds. The high income groups are comparatively investing low in mutual funds as they find other investment options giving better returns than mutual funds.

Data analysis based on gender of the respondents :

TABLE NO 2: Gender and Investing in Mutual Funds

GENDER	INVESTING IN MUTUAL FUNDS		TOTAL
	YES	NO	
MALE	64	32	96
FEMALE	18	7	25
TOTAL	82	39	121

**Scope of the Study :**

The scope of the study is limited to Ahmedabad city.

**Sources of Data :**

There are two types of data collection techniques, primary as well as secondary sources.

**Primary data:** To evaluate the preference of mutual funds, the study uses primary data and it is collected with the help of questionnaire which administered 121 respondents.

**Secondary data:** Various websites, books, journals, research papers and magazines are used to collect secondary information on mutual funds.

**Sampling :**

The sample size for the purpose of study is 121 respondents and the sampling method is convenient sampling.

**Tools and Techniques :**

For the purpose of addressing the objectives under study, various statistical tools are used such as cross tabulation and Chi square test.

**Hypothesis :**

H<sub>0</sub>: There is no significant relationship between gender and awareness of investors in mutual funds

H<sub>1</sub>: There is significant relationship between gender and awareness of investors in mutual funds

H<sub>0</sub>: There is no significant relationship between income and awareness of investors in mutual funds

H<sub>1</sub>: There is significant relationship between income and awareness of investors in mutual funds

**Mutual Funds :**

A mutual fund is an investment vehicle in which many investors pool their capital to earn in which companies he should invest remains confused. So, he can pool his capital in mutual funds to get benefit of overall market. A mutual funds agency collects this capital from the market of investors and invest it in various securities like share, bonds, stocks and other money market instruments. Mutual funds are divided into several types of categories representing the kinds of securities they invest in, their investment objectives, and the type of return they seek.

A share of mutual fund represents investment in different securities instead of just holding one.

**Various Types of Mutual Funds :**

1. Equity funds
2. Debt funds
3. Money market funds
4. Index funds
5. Balanced funds or hybrid funds
6. Income funds

TABLE NO 25: Chi-Square Tests

Likelihood Ratio	14.376	12	0.277
Linear-by-Linear Association	4.922	1	0.027
N of Valid Cases	80		

H0: There is no significant relationship between income and % of savings in MFs.  
 H1: There is significant relationship between income and % of savings in MFs.

From the **table no. 24** it is observed that respondents with income of 500000 to 1000000 invest less than 15% of their savings in mutual funds. And 15% to 25% of the savings are invested by respondents with income of between 500000 to 1000000. Therefore the investors with middle income group prefer mutual funds. The chi- square statistic is 11.580 and the significance value is 0.480 which is higher than 0.05 that says income has relationship hence H0 is rejected.

TABLE NO 26: Income and % of Return on Mutual Funds

INCOME	%OF RETURNS ON MUTUAL FUNDS					TOTAL

H0: There is no significant relationship between income and not investing in MFs.

H1: There is significant relationship between income and not investing in MFs.

From table no. 28 it is observed that there are 8(21%) respondents out of 38 who do not invest in MFs within RS 500000- RS 1000000 who finds other investment options better than mutual funds. The chi-square statistic is 7.424 and the significance value is 0.593 which is higher than 0.05 that shows income has relationship on not investing in mutual funds. H0 is rejected.

## V. CONCLUSION :

The objective of the paper was to study awareness of mutual funds in the Ahmedabad. The study concludes that more males invest in mutual funds compared to females. Males invest for long term in mutual funds. Both gender prefer SIP over lump sum investment and the period of investment is around 3 to 7 years. The percentage of savings by males and females invest in mutual funds remains same but at the same time satisfaction with the returns differs between the both. Males and females, both consider the same parameters for investment and also they find themselves only partially aware about the mutual fund schemes. The study also considers income as a base to know about the investors preference which was observed that income has no relationship on whether the people wants to invest in mutual funds or not. Also income has no relationship on returns expected and also no relationship with the period of investment on the other hand income has a direct relationship with the kind of investments. It is observed that high income group of people invest their savings in other options like real estate, commodities etc. Thus the study concludes that gender has a relationship with awareness of mutual funds and income to certain extent plays a role in deciding in which type of mutual fund it has to be invested.
