

Retirement Planning Behavior

This book offers an empirical understanding of data analysis executed for developing scale to measure the retirement planning behavior of an individual. It covers the extensive data analysis performed on primary data and secondary data collected in relation to retirement and its various aspects from working individuals residing in Gujarat State, India.

The book discusses various findings of the different statistical tests like EFA, CFA, T-test, ANOVA. Furthermore, structural equation modelling used for model development and validation has been discussed in detail. This results will be useful for research scholar, researcher, academicians and individuals as well.
